

This is a simple template to align stuff to the center. To use this, place `{{center|text}}` on the desired page, replacing *text* with the desired content.

Example

Code `{{center|Foresight studies!}}`

Result Foresight studies!

To do this without a template, simply use the following code:

```
<div class="center" style="width:auto; margin-left:auto;
margin-right:auto;"></tt>your text</div></code>
```
