

It is used to build message box templates for pages. That is, page types not covered by {{ambox}}, {{tmbox}}, {{imbox}} or {{cmbox}}. Thus it should *not* be used for boxes for articles, talk pages, image pages or category pages.

This template works almost exactly like {{ambox}} and uses the same parameters.

Contents

- 1 Usage
- 2 Other pages message box types
- 3 Examples
- 4 Parameters
 - ◆ 4.1 The small parameters

Usage

Simple usage example:

```
{{ombox | text = Some text.}}
```

Some text.

Complex example:

```
{{ombox
| type      = style
| image     = [[Image:Emblem-question-yellow.svg|40px]]
| style     = width: 400px;
| textstyle = color: red; font-weight: bold; font-style: italic;
| text      = The message body text.
}}
```

The message body text.

Other pages message box types

The following examples use different **type** parameters but use no image parameters thus they use the default images for each type.

type=speedy ? Speedy deletion templates.

type=delete ? Deletion templates.

type=content ? Major warnings and problems.

type=style ? Minor warnings and problems.

type=notice ? Notices and messages of any kind, both permanent and temporary.

type=move ? Merge, split, rename and transwiki messages and proposals.

type=protection ? Protection templates when shown on "other pages".

Examples

Some examples using the "notice" style:

No type and no image given (**default**)

No type and **image=none** ? No image is used and the **text** uses the whole message box area.

image = [[Image:Gnome globe current event.svg|42px]]

imageright = [[Image:Nuvola apps bookcase.svg|40px]]

This page documents an Foresight Wiki guideline. It is a generally accepted standard that editors should follow, though it should be treated with common sense and the occasional exception.

Guideline

This page in a nutshell: This template is used to build message boxes for all pages that are *not* articles, talk pages, image pages or category pages.

Parameters

List of all parameters:

```
{{ombox
| type = speedy / delete / content / style / notice / move / protection
| image = none / [[Image:Some image.svg|40px]]
| imageright = [[Image:Some image.svg|40px]]
| style = CSS values
| textstyle = CSS values
| text = The message body text.
```

```
| small = {{{small}}} / yes
| smallimage = none / [[Image:Some image.svg|30px]]
| smallimageright = none / [[Image:Some image.svg|30px]]
| smalltext = A shorter message body text.
}}
```

type

If no **type** parameter is given the template defaults to type **notice**. That means it gets a gray border.

image

No parameter = If no **image** parameter is given the template uses a default image. Which default image it uses depends on the **type** parameter.

An image = Should be an image with usual wiki notation. 40px - 50px width are usually about right depending on the image height to width ratio. (But the message box can handle images of any size.) For example:

```
image = [[Image:Crystal package settings.png|40px]]
```

none = Means that no image is used.

imageright

No parameter = If no **imageright** parameter is given then no image is shown on the right side.

An image = Should be an image with usual wiki notation. 40px - 50px width are usually about right depending on the image height to width ratio. (But the message box can handle images of any size.) For example:

```
imageright = [[Image:Nuvola apps bookcase.png|40px]]
```

Anything = Any other object that you want to show on the right side.

style

Optional CSS values used by the entire message box table. Without quotation marks " " but with the ending semicolons ;. For example:

```
style = margin-bottom: 0.5em;
```

textstyle

Optional CSS values used by the text cell. For example:

```
textstyle = text-align: center;
```

text

The message body text.

The small parameters

small = yes

type = style
small = yes

small

yes = Makes it a smaller right floating message box. This also makes the default images smaller. Note that any data fed to the **smallimage**, **smallimageright** and **smalltext** parameters is only used if "small=yes". To make it so your template also understands the small parameter you can use this code:

```
small = {{{small|}}}
```

small = yes
image = [[Image:Replacement filing cabinet.svg|50px]]
smallimage = [[Image:Replacement filing cabinet.svg|32px]]

smallimage

No parameter = If no **smallimage** parameter is given then this template falls back to use the **image** parameter. If the **image** parameter also is empty then a small default image is used.

An image = Should be an image with usual wiki notation. 30px width is usually about right. For example:

```
smallimage = [[Image:Replacement filing cabinet.svg|30px]]
```

none = Means that no image is used. This overrides any image fed to **image**, when "small=yes".

small = yes
imageright = [[Image:Nuvola apps bookcase.png|50px]]
smallimageright = none

smallimageright

No parameter = If no **smallimageright** parameter is given then this template falls back to use the **imageright** parameter. If the **imageright** parameter also is empty then no image is shown on the right side.

An image = Should be an image with usual wiki notation. 30px width is usually about right. For example:

```
smallimageright = [[Image:Nuvola apps bookcase.png|30px]]
```

Anything = Any other object that you want to show on the right side.

none = Means that no right side image is used. This overrides any image fed to **imageright**, when "small=yes".

smalltext

A shorter version of the message body text. If no **smalltext** parameter is given then this template falls back to use the **text** parameter.
